Life Stages | Cat Friendly Homes

The final stages in the life cycle of a cat are the senior cat stage and geriatric cat stage. Cats in the senior stage fall within the age range of 11 - 14 years; on the other hand, cats in the geriatric stage are 15 years of age and above. Now the geriatric phase is the most advanced stage a feline can ever attain during its lifetime.

The Life Cycle Of A Cat • Kritter Kommunity

At one-year old a kitten becomes an adult. A female cat attracts a male cat. The two cats mate. Kittens grow inside the female's body.

The Life Cycle of a Cat

The older cat, from ten to fifteen years old, can spend this time as a bit older than their fully mature self the whole time, or they can slow down quite a bit, during the same five year span. As they gradually show signs of becoming elderly cats, we should offer extra support. From fifteen to over twenty, senior cats can live a slow, happy life.

Cat Growth Stages: Domestic Life Cycle - the Way of Cats

As your cat matures into a young adult, they reach full body size and begin to settle into their life-long patterns. They will no longer need as many calories to support the rapid growth of being a kitten, so it's important to switch their diet to one more appropriate for adult cats.

T.H.E. Cat Hospital - Cat Life Stages

Between four to six months, cats lose their baby teeth and their permanent ones grow in. All the abilities of an adult cat - such as stalking and hunting -- are now fully developed. A female cat will go into heat for the first time between 7 and 12 months, and a male cat will be sexually mature between 9 and 12 months of age.
