Chapter 11. Fetal Pig Dissection - Anatomy and Physiology ...

The fetal pig (*Sus scrofa*) belongs to the class "Mammalia", the same class to which man belongs. The gestation period of the pig is about 115 days and the fetal pigs are approximately 30 cm in length at the end of this period. Mammals are vertebrates having hair on their body and mammary glands to nourish their young.

Fetal Pig Dissection Background:

Mammals are vertebrates having hair on their body and mammary glands to nourish their young. The majority are placental mammals in which the developing young, or fetus, grows inside the female's uterus while attached to a membrane called the placenta. The placenta is the source of food and

oxygen for the fetus, and it also serves to get rid of fetal wastes.

Fetal Pig Dissection and Fetal Pig Anatomy - Biology Junction

PIG DIGESTIVE SYSTEM . It . is not easy to study the digestive organs of a human. However, anatomy of the human digestive system can be studied by examining the digestive system of a pig, an animal similar to a human. A pig resembles a human both internally and externally in many ways. The pigs you will dissect are called fetal pigs.

PIG DIGESTIVE SYSTEM

Pig (*Sus scrofa*) developmental model is studied extensively due to the commercial applications of pigs for meat production and for health issues such as obesity, cardiovascular disease, and organ transplantation (xenotransplantation). Historically, there is an excellent description of the pig reproductive estrous cycle and the cyclic changes that occur within the ovary.

Human Biology 3-6-05 - Ledyard

No, a fetal pig doesn't look much like a fetal human but then I don't know of anyone (including Darwin and Haeckel) who ever claimed otherwise. Nor am I aware of any drawings purporting to be of fetuses that attempt to make them look overly similar. Human and pig embryos, now that's another story:
