The brachial plexus is a network of nerves (formed by the anterior rami of the lower four cervical nerves and first thoracic nerve (C5, C6, C7, C8, and T1). This plexus extends from the spinal cord, through the cervicoaxillary canal in the neck, over the first rib, and into the armpit. It supplies afferent and efferent nerve fibers to the chest, shoulder, arm, forearm, and hand.

The plexus is made by merging of the anterior branches of the 5th, 6th, 7th and 8th cervical nerves (C5-C8) with the participation of the anterior branch of the first thoracic spinal nerve (Th1). Grossly speaking, the plexus arises from the spinal cord, extends through the cervicoaxillary canal of the neck, crosses over the first rib and enters into the armpit.

The brachial plexus is a network of nerve fibres that supplies the skin and musculature of the upper limb. It begins in the root of the neck, passes through the axilla, and runs through the entire upper extremity. The plexus is formed by the anterior rami (divisions) of cervical spinal nerves C5, C6, C7 and C8, and the first thoracic spinal nerve, T1.

The brachial plexus passes from the neck to the axilla and supplies the upper limb. It is formed from the ventral rami of the 5th to 8th cervical nerves and the ascending part of the ventral ramus of the 1st thoracic nerve. Branches from the 4th cervical and the 2nd thoracic ventral ramus may contribute.

The brachial plexus is composed by 5 anatomical components: 5 roots, 3 trunks, 6 divisions, 3 cords, and 5 terminal branches (Fig. 1). Five roots include the anterior branches of the 4 lowest cervical spinal nerve roots (C5-C8) and the first thoracic nerve root (T1). Rarely, it is co-contributed by C4

Anatomie [upravit | editovat zdroj]. Plexus brachialis (C4–Th1) vzniká propojením předních větví C5–C8, k nimž na kranální straně přichází spojka z C4 a kaudálně se k nim připojuje většina vláken z Th1. Spojky z C4 a z Th1 jsou individuálně variabilní. Ventrální větve C5–Th1 se spojují do tří primárních svazků (truncus superior, medius a inferior).

A brachial plexus injury, also known as brachial plexus lesion, is an injury to the brachial plexus, the network of nerves that conducts signals from the spinal cord to the shoulder, arm and hand. These nerves originate in the fifth, sixth, seventh and eighth cervical, and first thoracic spinal nerves, and innervate the muscles and skin of the chest, shoulder, arm and hand. Brachial plexus injuries can occur as a result of shoulder trauma, tumours, or inflammation. The rare ...
